

S6 unreachable = $44/135 = 32.6\%$ [25.3%, 40.9%] — above the pre-registered 15% threshold, so the protocol makes the BOUNDING INTERVAL the headline: $P1 \in [0.0\%, 32.6\%]$.
Complete case $0/91 = 0.0\%$ [0.0%, 4.1%] is reported, but is not the headline.

the rate does not fall as
the sample grows
